

ABSTRACT OF THE DISCLOSURE

A multi-level accommodation structure including adjacent vertically positioned accommodation units each having a core wall extending between a floor on the top of a slab of a lower accommodation unit and a ceiling on the bottom of a slab of an upper accommodation unit; a core wall in each upper and lower accommodation unit with the core wall having couplings for plumbing, electrical and heating and air conditioning components extending to at least one face of the core wall, and a vertical chase within the core wall through which connector members are passed and connection members within the core wall are attached to the couplings such that vertically aligned core walls in vertically aligned accommodation units have aligned chases connected through holes provided through the slabs having a floor of an upper accommodation unit on one face and the ceiling of said lower accommodation unit comprising a bottom of said slab.
